Red Admiral 73%↓↑138%

Butterflies & Moths

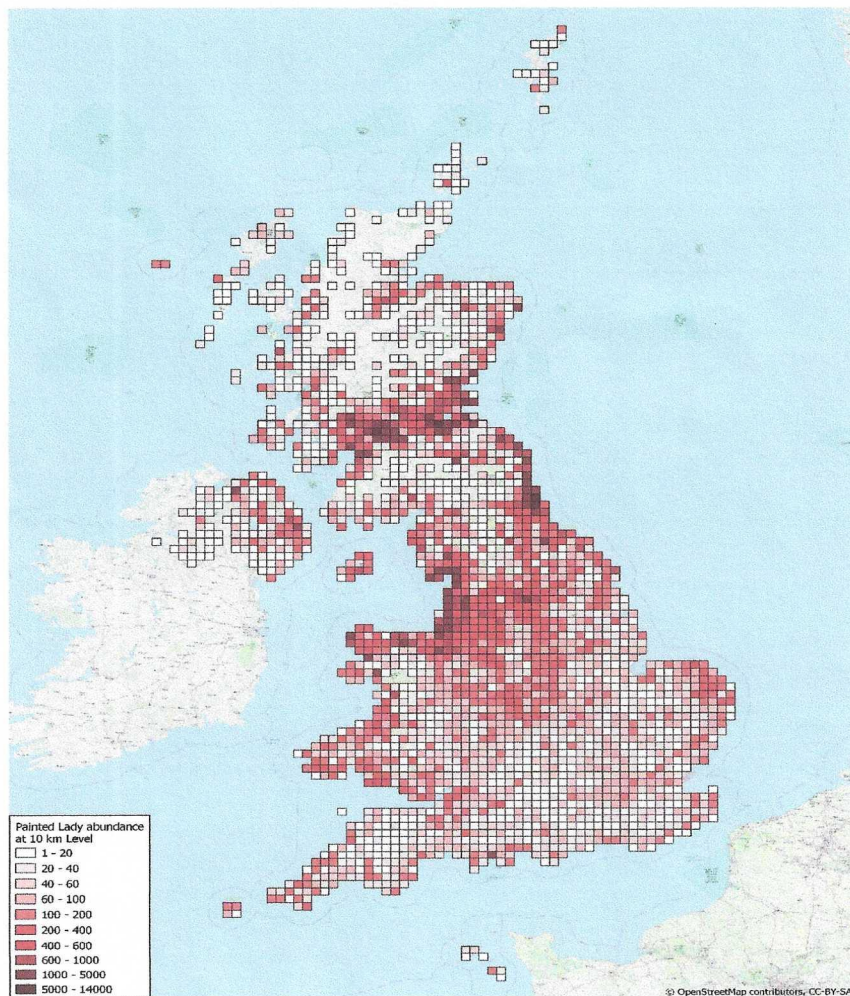

A Painted Lady Year?

The incredible inter-continental migrant, the **Painted Lady** had an excellent year.

They migrate northwards from the Sahara to central and northern Europe and back with their offspring every year – a round trip of some 7,000 miles.

The most recent **Painted Lady Years** in UK were 2009, 2003 and 1996.

Although they were recorded right across England, the largest counts were in the north this year.

Believe it or not 2019 was a poor year for the 3 common white butterflies, Large, Small and Green-veined. After doing extremely well last year they suffered a large drop in numbers – each one declined by 42% compared to 2018.
