

July

*Do what we can, summer
will have its flies.*

Ralph Waldo Emerson

July info

- ❖ Named by the Roman Senate in honour of Roman general [Julius Caesar](#), it being the month of his birth.
 - Prior to that, it was called [Quintilis](#), being the fifth month of the 10-month calendar
 - Usually the warmest month in most of the Northern Hemisphere
 - ◆ Its **Finnish** name is heinäkuu, the month when the heinä - hay - is cut

July's birthstone

Ruby gemstone
means contentment

July's flowers of the month

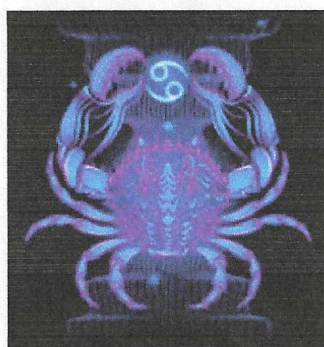

White Water Lily

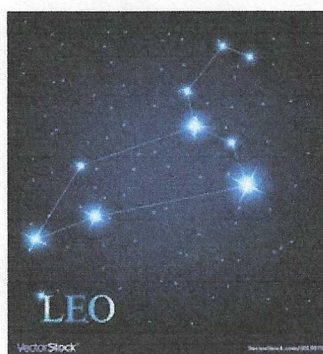

Blue Delphinium

July's zodiac signs

Cancer

and

Leo

July

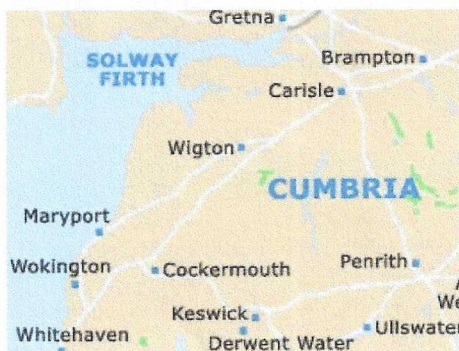

Advantages of Lockdown – unexpected benefits – what are they for you?

One of them for me has been more time for listening, especially while doing the boring jobs.

My ears pricked up when I heard someone praising a **flower meadow** not only for its looks but for encouraging insects.

UK has 27,000 insect species but they're in decline and the Wildlife Trust is calling for a reduction in the use of pesticides.

Then I remembered the quote at the start of this July poster and our reaction to flies - not v encouraging for the fly species of which at least 120,000 species worldwide.

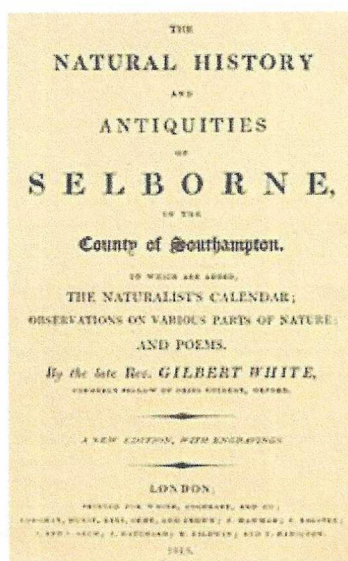

The programme featured the **Get Cumbria Buzzing** scheme of wild flower verges in West Cumbria from Penrith to Workington and up the coast around to Carlisle. Wow! Worth a visit at this time of year to see them (as well as the sea and the fells), full of vibrant colour with nectar and pollen for pollinators,

But Risinghurst's wild flower meadow is looking better by the year and supporting the pollinators.

A programme highlighting another advantage - **time to make the most of your outside space** - was about the 300th anniversary of the birth of Gilbert White, regarded by many as England's

first ecologist who was born on 18 July 1720.

He was "one of those who shaped the modern attitude of respect for nature, rather than studying dead specimens. White observed live birds and animals in their own habitats over many years; creating a 'new kind of zoology, scientific, precise and based on the steady accumulation of detail'".

He watched the same place for many hours taking notes almost every day mostly about what he saw in his garden at Selbourne.
